# ASC safetylight

Assembly tips

Installation in a glider hull

Determining the positions using the drilling template

Pre-drill with a thin drill
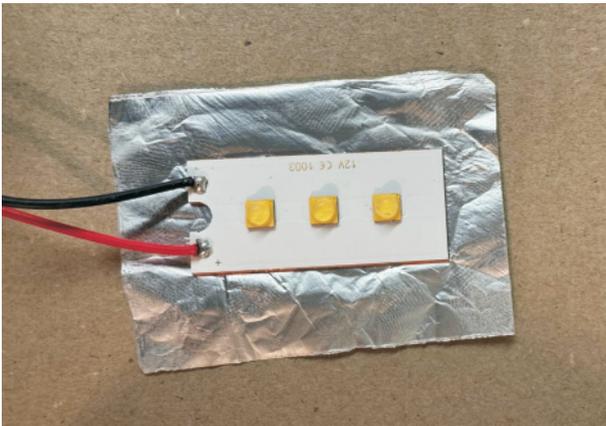

Drill with a 7 mm drill bit

ASC safetylight

Assembly tips

Deburring drill holes

**Prepare self-adhesive silver foile**

Place the LED board and apply 2K adhesive (e.g. epoxy) to the corners

LED boards glued on the inside, protected against dirt on the outside with clear adhesive film

With the aid of the silver foil, the elements can be securely positioned and no dust can penetrate from any side

After wiring and connecting to the electronics,
you should avoid looking into the extremely bright light when testing!

Have fun installing it
– and flying.
